I wrote the Automation API by using Postman and Newman. I have verified all the API test case in Tests in Java language to make sure that all the result returns correctly.

====== How to install Newman (Newman is like the executor for running the result)  =========

1. You should install Postman and Node.js by https://nodejs.org/en/download/ in case already have Node.js then skip this part.

2. Install Newman with NPM command as `npm install -g newman`

3. Install Newman Report as command line `npm install -g newman-reporter-htmlextra`

4. You can run and see the result as command line `newman run https://www.getpostman.com/collections/ 5b9a7b0f29e5d9b04979 testDemo.postman_environment.json -- reporters=cli,htmlextra`
